@ImPDP

OBJECTIVE

Mobile and Web Developer specializing in front end. Well-versed in Java and Javascript. Building objected oriented native, cross platform applications and responsive web applications in React.

WORK EXPERIENCE

BlazeDream Technologies

React Native Developer

(August 2020 - Present)

Developed an E-Commerce app - ApnaBasket based on Canada and a Medical Subscription app called Dr Slip based on India with minimal UI/UX from the scratch. Built with state management tool Redux and single root navigation with React Navigation and supported deep-linking in both android and ios. Consumed APIs developed by the team of PHP Developers. Integrated Paypal and Stripe Card Payments in the Apnabaset without official module/support.

Atithi Khana

Mobile Application Developer

(February 2019 - August 2020)

Built a native Android application from the scratch with the BaaS(Firebase). Developed app UI concepts and optimal APK with minimal business logic. Developed an ordering app, partner app, and an admin app with same serverless backend and Node JS in the cloud to run services and functions. Built a Cross-Platform ordering app with React Native to also support ios Devices with Expo and later ejected in the end to integrate payment gateways. Carried out tests to discover bugs and optimize usability.

WEB PROJECTS

Klogbase.com

A Social media app to share articles and research works at the public and institutional level. This project is currently under research and development. The MVP is being developed with ReactJs and Firebase.

Jarvis Den

<https://jarvisden.com>

(December 2020 - December 2020)

Built a static site with Gatsby. With this React-based static site generator, developed the simple site as much as efficiency/performant in loading the assets.

TNSG Sports

<https://tnsgsports.com>

(November 2020 - December 2020)

Built a tournament booking app with React as a freelance project. The development was initialised as a static site and changed as a web app with ordering and booking functionalities. Built the authentication-free app with Firebase as Backend.
